

Marker Jester/Griffon/Squire

For midsole position:

- check on your boot, whether the boot center mark is really in the middle (for some boots it isn't)

- align with scale on toe and heel template to mid sole mark on ski (or measure 1/2 sole length from toe/heel edge to mid sole mark)

- for DEMO version: mount to 315 mm boot sole length

- for SCHIZO version: mount to middle of boot sole length range

- when the template is fixed to the ski, check with your bindings and boots inserted, whether positioning is correct (also for screw positions)

turn off information by using the PDF layer function

cut out separately and use to find midline
